

AutoTORQ Chain Pipe Wrench

- **Incredible safety benefits**
- **Portable & tough**
- **5,000 to 82,000 ft-lb of torque**

Unmatched safety

Airbags and seatbelts are synonymous with auto industry safety but when it comes to drill deck, shop or pipe yard safety, only one tool matches up - AutoTORQ Hydraulic Chain Pipe Wrench.

AutoTORQ Hydraulic Chain Pipe Wrenches are a one of a kind tool in the pipe make-up and break-out game. They provide a safer and faster alternative to the hands-on set up of tongs and come-a-longs and help eliminate more than half of the injuries on a drill deck.

With the press of a button, the AutoTORQ Hydraulic Chain Pipe Wrench allows the user to move away from the dangerous, and even deadly, 4-foot area around the pipe.

Available in five models, pipe make-up and break-out is a

breeze. Just by latching the chain around the pipe and adjusting the slack with the tensioning nut, tightening and loosening of tubular threaded joints are no problem.

When used with the FASTORQ 603A Power Unit, FASTORQ's five chain pipe wrench models provide torque strength from 5,000 to 82,000 ft-lb.

In addition to its unmatched safety, the AutoTORQ Hydraulic Chain Pipe Wrench gives operators the portability to go anywhere it's needed. When compared to the lack of portability offered by table-top models, there is no comparison.

See FASTORQ's Warranty page 29 for more details.

Pipe make-up and break-out with tongs is one of the biggest drilling safety hazards to workers today. It's a major concern for OSHA. So, why are you still using tongs and come-a-longs when there is a safe, easy and dependable tool available from FASTORQ. Stop risking worker safety and buy an AutoTORQ Hydraulic Chain Pipe Wrench today.
